## **BOSCH WHEEL SERVICE INTRODUCES PORTABLE NTF NITROGEN TIRE FILLING SYSTEM**

**LAS VEGAS, NV, November 4, 2008** – Bosch Wheel Service is pleased to announce the introduction of the fully automatic NTF Nitrogen Tire Filling System. The NTF is user-friendly and easy to use, and quickly fills four vehicle tires simultaneously, saving time and making a shop more efficient and productive.

For years, aircraft, race cars and over-the-road trucks have used nitrogen in tires because the larger nitrogen molecules do not permeate tire liners as quickly as smaller oxygen molecules. Properly inflated tires not only save fuel, but also increase handling and comfort, and run cooler which results in longer tire life.

The fully automatic Bosch NTF 715 is easy to use – the technician simply hooks the hoses up to the vehicle's tires, programs the unit, and the machine can quickly deflate and then fill four vehicle tires with nitrogen. And, with the optional "dually" hose installed, the NTF 715 can fill even more tires at the same time. This makes the

NTF 715 one of the most productive nitrogen filling machines on the market. If the customer just needs to top-off a single tire, the NTF 715 has a single-fill hose with gauge to easily add nitrogen to a tire.

One of the most time-saving optional features to help increase shop productivity is the Technician Notification System, which allows the technician to walk away and work on another vehicle while the NTF 715 operates automatically, alerting the technician when the nitrogen filling job is complete. And another handy feature is the integrated rechargeable battery that provides power for a full day's use. This self-contained power feature provides a portability that lets the technician take the unit to the vehicle even when outside the service bay.

To ensure long machine life and optimal nitrogen purity, the Bosch NTF 715 has one of the most advanced filtration systems on the market. Four filters – a water separator, oil separator, carbon filter bed and fine particulate filter – all help reduce contaminants reaching the 5.1 CFM, fully-aged, large bore membrane. This membrane is the key to the NTF 715's high throughput and efficiency.

The NTF 715 Portable Nitrogen Tire Filling System is part of a full product line of wheel service equipment carrying the Bosch brand and backed by the quality and reliability shops have come to expect.

### **About Bosch Diagnostics**

The Bosch Diagnostics solution includes Diagnostic Tools and Wheel Service Equipment, featuring in-depth software, integrated service information, expert training, technical phone support and quality Bosch parts.

Bosch Diagnostics combines the best of the former entities that comprise it: Vetronix, Beissbarth and Accu-Turn. With the excellence of these product lines combined with the value of the Bosch brand, Bosch Diagnostics is in a class by itself.

Diagnostic tools include scan tools for domestic, Asian and European vehicles, J2534 reprogramming devices, plus scopes, multimeters, and a vibration analyzer. Wheel Service products include a full range of tire changers, wheel balancers and alignment equipment
